

Model-Based Inference Researcher

Statistical signal processing · inverse problems · spectral estimation · electromagnetics

Research Profile

I combine physical models, statistical inference, and information theory to determine what measurements contain, what they lose, and why. My work emphasizes interpretable forward models, identifiability, uncertainty, and performance bounds. I develop these ideas across Doppler spectra, phased-array sensing, precipitation retrieval, automotive radar, and electromagnetic field and antenna-array measurements.

- Model-based inversion
- Likelihood methods
- Cramer–Rao bounds
- Sampling and aliasing
- Array processing
- Spherical harmonics

Appointments

2025–present	Postdoctoral Researcher Model-based array and spectral inference for phased-array atmospheric radar and antenna measurements in the Microwave Sensing, Signals and Systems group.	TU Delft
2020–2025	Doctoral Researcher Theory and estimators for short-record Doppler processing: finite-sample spectrum models, counter-aliasing, incoherent processing, and uncertainty analysis.	TU Delft
2016–2018	Calibration Engineer Statistical modelling and threshold design for passenger-vehicle misfire and catalyst diagnostics.	Bosch, Bangalore

Education

2025	PhD, Electrical Engineering <i>On Doppler Processing for Fast Scanning Weather Radars.</i>	TU Delft
2020	MSc, Electrical Engineering, cum laude Telecommunication and Sensing Systems. Thesis on computationally efficient conical horn design.	TU Delft / ASTRON
2016	BTech, Electronics and Instrumentation CGPA 8.94/10; alumni merit award for best final-year undergraduate student.	CET Bhubaneswar

Open Research Software and Data

TWORIT	Theoretical waveguide solver S-parameters and far fields of cascaded cylindrical and irregular tapered-cone waveguide structures.	4TU.ResearchData
WiDSE	Wind and DSD Estimator Model-based wind and raindrop-size retrieval from weather-radar Doppler spectra.	4TU.ResearchData
PSE	Parametric Spectrum Estimator Finite-record estimation of precipitation Doppler moments with processed radar data.	4TU.ResearchData

Methods and Technical Skills

Inference	Maximum likelihood, Bayesian inference, Hamiltonian Monte Carlo, Fisher information, Cramer–Rao bounds, uncertainty quantification
Signal processing	Spectral estimation, irregular sampling, aliasing analysis, Doppler processing, array processing, Gaussian processes
Electromagnetics	Waveguide theory, modal methods, antenna arrays, embedded element patterns, vector spherical harmonics
Programming	MATLAB, Python, Ruby; reproducible numerical simulation and data analysis
Tools	CST Studio Suite, FEKO, Git, Linux, Windows, macOS

Awards and Communication

2020	MSc graduated cum laude Telecommunication and Sensing Systems; thesis research conducted with ASTRON.	TU Delft
2016	Alumni Merit Award Best final-year undergraduate student.	CET Bhubaneswar
	Technical speaking Internet of Things and Ruby talks at Eurucamp 2014, Euruko 2015, and Deccan Ruby Conference.	

Languages

Odia (native), English (near-native; second language since childhood and primary academic and professional language), Hindi (professional), Sanskrit (beginner).
